THREATENED, ENDANGERED AND CANDIDATE SPECIES

for

YELLOWSTONE NATIONAL PARK within Montana 3/20/2003

ENDANGERED (E) - Any species that is in danger of extinction throughout all or a significant portion of its range

THREATENDED (T) – Any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

CANDIDATE (C) – Those taxa for which the Service has sufficient information on biological status and threats to propose to list them as threatened or endangered. We encourage their consideration in environmental planning and partnerships, however, none of the substantive or procedural provisions of the Act apply to candidate species.

EXPERIMENTAL NONESSENTIAL POPULATION (XN) – A population of a listed species reintroduced into a specific more flexible management under the Act.

CRITICAL HABITAT (CH) – The specific area (i) within the geographic area occupied by a listed species, at the time it is listed, on which are found those physical or biological features (I) essential to conserve the species and (ii) that may require special management considerations or protection: and (iii) specific areas outside the geographic area occupied by the species at the time it is listed upon determination that such areas are essential to conserve the species.

In accordance with section 7(c) of the Act, the Service has determined that the following listed species may be present in Yellowstone National Park:

| COMMON NAME | SCIENTIFIC NAME | STATUS | RANGE – MONTANA |
|----------------|-----------------------------|---------------------------|---------------------------------------------------------------|
| Bald Eagle | Haliaeetus leucocephalus | Threatened | Forested riparian statewide |
| Gray Wolf | Canis lupus | Experimental Nonessential | Resident, transient; Forests in western Montana |
| Grizzly Bear | Ursus arctos horribilis | Threatened | Resident, transient; Alpine/subalpine coniferous forest |
| Canada Lynx | Lynx canadensis | Threatened | Resident; western Montana – montane spruce/fir forests |

Yellowstone National Park is within the Yellowstone gray wolf nonessential experimental population area. The experimental population area for the Yellowstone region includes the entire State of Wyoming, a portion of southeastern Idaho east of Interstate 15, and a portion of Montana east of Interstate 15 and south of the Missouri River. The Service recommends that the Park analyze the impacts on nonessential experimental populations, along with other populations of fish and wildlife, when

complying with the requirements of the National Environmental Policy Act (NEPA) and other relevant land management statutes. Any protective measures in addition to those outlined in the final rules for managing the nonessential experimental wolf populations, or additional review procedures, are at the discretion of the Park Service.
